1. Ethical Reflection and Decision-Making This module introduces the central themes in the study of academic ethics: the philosophical underpinnings of ethical reflection and decision-making; the norms of ethical conduct and attitudes that are considered critical to the development of responsible and ethical decision-making in the digital age; the practical approaches and tools for reflecting on one's conduct in the online environment and resolving conflict in one's actions; and the use of appropriate technology in the study of ethical issues. Students consider theoretical and practical approaches to various ethical problems including plagiarism, digital citizenship, protecting academic integrity, and plagiarism in online assignments. The module also encourages self-reflection on one's online presence and examines the connections between ethical reflection and attitudes that encourage a more ethical online presence. 2. Digital Tools and Technologies for Research This module introduces students to the range of digital tools and technologies used in various areas of modern research, including access to, and use of, online repositories of primary and secondary materials; design, construction, and analysis of software and Web applications; use of Web data collection tools; and use of social media for data collection and analysis. Students consider the ethical issues raised by the use of digital tools and technologies, especially those that use personal data. Students learn about the cultural dimensions of digital data and how to create and maintain a trustworthy digital footprint, and they consider privacy, accessibility, and legal issues surrounding the use of digital media. Students are introduced to key research findings related to some of the ethical issues raised by the use of digital technologies, and they explore ethical frameworks for the conduct of research and scholarly communication in the digital age. Students practice ethical reflection and decision-making using a combination of theoretical concepts, practical approaches, and appropriate technological tools. They develop critical and creative skills that will be relevant throughout their university studies. ETHICS AND THE INTERNET: This course will introduce students to the ethical issues surrounding the use of the Internet and other digital technologies. An important aspect of this course will be the exploration of the many ethical theories and perspectives that give shape to decision making in this area. ETHICS IN ACTION: This course will demonstrate how issues of academic integrity arise in the online environment and offer practical examples of how these issues have been addressed within different academic contexts. Students will explore various ways of mitigating the risks of plagiarism and other forms of academic misconduct. The course will also explore research practices and research ethics, including the ways in which ethical issues arise in research conducted 77a5ca646e

WebStorm With Key

With WebStorm, you have better editing and collaboration tools, new development features, improved debugging, plus more than 500 essential improvements to the JavaScript and web development experience. Now you can use your favorite editor to write JavaScript and enjoy an enhanced debugging experience while working with other developers on a project. And it's free! WebStorm gives you a fast, robust IDE that helps you write, debug, and collaborate more effectively. It features an intuitive, interactive editor that's optimized for writing JavaScript and HTML, including TypeScript, React, Vue, Angular, or Angular Universal. Want to write your JavaScript and HTML quickly and easily? Use the built-in support for TypeScript and Live Templates. Save time by using an integrated Debugger and watch your JavaScript become magically smart while in development. Pair your editor with WebStorm's powerful in-browser support for running Node.js, or include a Node.js workspace to debug and deploy your own Node.js projects. Or, build the frontend of your app with the Vue.js support and use the integrated support for Webpack and Live Reload to keep your app fast and interactive. Integrated debugging, live updates, and automatic code completion Our IDE comes with all the essentials you'll need to write, debug, and test your app: •JavaScript debugging and inspection Integrated debugging lets you step through your code and test conditions, just like you do in your browser. That means you can step into functions, classes, interfaces, and even objects to see their properties, interact with them, and navigate through their call stack. When you're done debugging, you can automatically step back out of the function and resume writing code without retyping it. •Live updates Watch your JavaScript become magically smart as it is debugged in the Integrated Debugger. Simply hover your mouse over any variable to see its current value and set to see it automatically updated as you type. There's no need to copy values out of the debugger, and variables will update in the editor as you type, so you can focus on writing code and not worrying about the context and state of the variables in the debugger. •Automatic code completion When you're ready to build your code, the IDE will suggest and provide the most useful options for what you're trying to accomplish. So you won't have to look things up in a separate reference. For instance, the app can show you what methods a class
