LibGDX - How to use Actor to draw multiple Rectangles I  
am a self-taught java programmer with a beginner's  
knowledge of LibGDX. I am making a game and in it's  
most simple form, the enemy sprite class looks like this:  
public class Enemy extends Actor { private  
TextureRegion enemyTR; private Sprite enemySprite;  
private Vector2 enemyLocation = new Vector2(160.0f,  
-160.0f); private Vector2 enemyVelocity = new  
Vector2(0.0f, -3.0f); public Enemy() { enemyTR = new  
TextureRegion(Gdx.files.internal("Enemy.png"));

---

```
enemySprite = new Sprite(enemyTR);
enemySprite.setPosition(enemyLocation);
enemySprite.setSize(enemySprite.getWidth() * 2,
enemySprite.getHeight() * 2); } } I have a background
screen that is 300x500. On the top of this background
screen, I have a sprite that is 50x50. In LibGDX's
HelloWorld example, I see the code: stage.addActor(new
Sprite(Gdx.files.internal("star.png")));
stage.addActor(new
Sprite(Gdx.files.internal("background.png"))); The stage
is set up to draw everything at (0,0), it also has a renderer.
I would like to position my enemy sprite so that it is in the
top-left corner of my background sprite (50x50), but I
need help doing so with the code.
```
