Q: Remove duplicates in txt file I have a txt file that contains a text and a few duplicated names. I need to remove the duplicated names and write the file back. I have tried the following code but it only works if there are just 3 names. `#!/usr/bin/perl -w $limit = 25; open(IN, ") { if (length($_) == 50) { print; } else { if ($_ =~ /\bname\b/i) { push(@array, $_); } } } close IN; open(OUTPUT, ">", "test1.txt"); foreach $x (@array) { print OUTPUT "$x "; } close OUTPUT; #! /usr/bin/perl -w $limit = 25; open(IN, ") { if (length($_) == 50) { print; } else { if ($_ =~ /\bname\b/i) { push(@array, $_); } } } close IN; open(OUTPUT, ">", "test1.txt"); foreach $x (@array) { print OUTPUT "$x "; } close OUTPUT;` A: Just add this line before foreach: `sorted @array;` Replaced `push(@array, $_);` A: First you should sort the array of names. What's New in the AutoCAD?

More than 250 new commands and enhancements in the drawing area. In the drawing area of AutoCAD, more than 250 new commands are available. New commands help automate tasks that are common in all CAD drawing programs, such as deleting multiple objects, converting objects to a different family of objects, and more. Printing, PDF and e-mailing: The AutoCAD® Print Task Pane lets you select commands for printing that are relevant to your design, while still showing you more. Automatically color correct and reduce to the correct paper size. Color standards from different countries and regions in a single project are automatically formatted into a profile and color-corrected before printing. Save time when exporting PDF or e-mailing files, with new commands and enhancements. Drawing, Layout, and Documentation: Adjusting the insertion point. You can now choose to move the insertion point one, two, or three steps at a time. (video: 1:12 min.) Create multiple views. You can now switch to a different view within the same drawing or have the same view active in multiple drawings. (video: 1:11 min.) Labeling with the text annotation feature. Use the text annotation tool to label objects or places in your drawings. You can label individual edges or use an entire edge path as a label. You can also add comments to your drawings. Calculate labels based on geometric boundaries. Create your labels automatically based on your drawing's dimension or graphical annotation objects, such as the height of a fence or the depth of a road. Measure distances in a set of points on a complex outline. Draw lines that aren't actually perpendicular to the plane of the paper. Create a title block in seconds. Automatic view navigation. When you are working with an architectural model or design, you can continue to use the direct navigation shortcuts to quickly navigate from one view to another. Virtual keyboard shortcuts. Autodesk added two new keyboard shortcuts in AutoCAD LT: Ctrl + F6 to create a new wall plane, and Ctrl + F9 to create a door frame. Improvements in the industry standard CAD operating environment. For example, in the Windows version, you can now press Ctrl + F11 to expand or collapse the tool bar at the bottom of the screen. In AutoCAD LT, you can also use Ctrl
