Lightroom tries to become photographer's, not just image-editing software. We'll see how well it succeeds as it'll roll out this fall. The \$99 version has Photoshop-like editing tools, but Lightroom also offers a library of adjustment presets, a look-and-feel designed for casual shooting, and a streamlined export process. In this, Lightroom becomes the weakest toolset in the Adobe Creative Cloud suite, but it's still a powerful and easy to use photo organizing and editing system. Lightroom debuted to rave reviews at last year's Adobe Max show, where it was the highest-rated new product. Of course that's music to the ears of Adobe's photo services market, which has grown considerably since Lightroom debuted. The biggest name in digital imaging says it will support the entire creative community for years to come. But digital imaging is a fast-changing industry, in which changes in techniques and hardware promote new competition. The repackaged Lightroom, as is the case with everything in the Creative Cloud, is exposed to that competitive landscape. It will be interesting to see how this new incarnation changes as the years go by, and how Lightroom looks today as the competition from Adobe, Apple, and Microsoft start to take their toll.

In short, mobile (or anything with a screen on it) almost always means responsive. It means that the design should look the same or similar among all types of devices. And with the mobile-first approach, that means the files need to be designed with this in mind – not to mention how to edit in whatever format the designer is sending you. The mobile-first approach is turning into a pretty good standard. It totally makes sense that web design has evolved to that point. It actually works really well to think about the mobile experience. And this is for designs as well as for the back-end. Designers in many cases tend to either leave out important assets in their designs or place them in weird places like in the upper left corner of the page. This can be very frustrating for users, but that doesn't mean it's a good idea to just ignore it or go with a mobile design. The 21st century is all about cost-effective media. And that includes design. An hour of design time can easily cost hundreds or thousands of dollars. It could end up meaning the loss of clients, or even a bankruptcy. Which is why a good design is essential. And it's almost always done in InDesign. That's true for print, but it's also true for digital. More agencies are finding that. And it makes sense. It means that there are a number of tools that are essential to your workflow, both as a creative and a designer. It also means that your designs are more than just an image. So having a good set of tools at your disposal is the only way to go.
