Lightroom is known to be a great RAW converter. It does not just allow you to edit RAW files, but also combine 12-bit color images with 16-bit data. It has a number of powerful tools to erase imperfections from an image and recover details as well as various abilities to restore damaged images. This makes it the best choice for users, who like to edit their images manually. Adobe has gone a step further and allowed us to select and customize our own creative workflow. Why would we want to do that? Because turning a RAW file into an editable image means that you can save time in the long term. The Adobe Camera RAW (ACR) RAW plugins available for Windows and Mac have the same functionality, yet a simplified interface. So, you don't have to purchase it separately if you have Lightroom already. Up until now, it has been either Adobe Camera RAW 6 or Lightroom, but we now also have a feature-rich Adobe Camera RAW plugin within the Lightroom application. We have been waiting for this for long. It came as a surprise, when Adobe announced that they are going to integrate it into the final release of Lightroom 5. It has been named as "Develop", and it has been extremely well implemented. I would say that it's almost as good as the well-known "Photoshop".

Many photographers today are using Photoshop to extract metadata from their images. These keywords can be used to find similar images in image collections. Tags can also be used to identify images in a catalogue and give one a psychological advantage by associating themselves with the image. However, this is not always practical and you might want to consider the following. When my sister was about eight or nine years old, she asked me what her name was. I quickly responded. I didn't want to tell her that her name was Chieko and I was afraid my response would actually hurt her feelings. I thought about it for a while, and then I went with the truth. 'Chieko Yamamoto,' I stated. 'What's wrong with that,' she asked. 'Nothing' I replied. 'Then why did you say something else,' she continued. 'Because I don't want to hurt your feelings. I don't think my friends would be comfortable to call you that.' 'That's because it's the most difficult name to type on a computer keyboard. You can't type it with your tongue and your facial expressions are not reliable sources of information.' 'I don't really care that much and you are too little to care anyway. Let's just drop it.' 'Now, Dave', my mother would call me. I also use 'Chieko.'' I told my sister. 'I like it.' 'It's one of my names.' 'So what is your everyone else's name?' 'I told her. "My full name is Dave Douglas." –She really thought about it for a moment. "Chieko Yamamoto," she said at last. "She sounds like a little Japanese princess." –I like it," I told her. "Where does it come from?" –She asked. 'I don't know exactly.' 'It's just the name I chose.' –Who did you choose your name from?" –I didn't.' "I just discovered that it was on the list of common names across all of the countries we visited." –Okay,' she said. "Give me your full name." 'Chieko Yamamoto. 933d7f57e6
