Adobe Photoshop CC 2017 is a considerably large update with an extremely heavy, almost daunting, set of changes. You can read the full, detailed list with every new feature and change right here. In addition, here are details on the newest features and some known issues. **ABOVE:** A draft map from Streetmapper for Windows. **BELOW:** A map created with Starry Night on the iPad Pro and Apple Pencil. Admittedly, it's not as fast to create a map from a scene like this, but it's certainly easier to move around while in the editor. More on the iPad and Adobe Photoshop in the next section. Adobe Photoshop Lightroom CC is one of the most powerful photography editing apps available in the Apple ecosystem. It only made sense that Adobe would outsource the iOS app to their own premier Cupertino-based dev house, and I'm glad they did. Adobe adds lots of great capabilities to Lightroom's library of features. On the downside, since the app's UI is totally revised, it's a bit difficult at first to get accustomed to. There are also some quirks with the older models (Lightroom 4.x and LR Classic), which makes it tricky to compare experiences. Still, once you learn how everything works, Lightroom is incredibly powerful. Colors are spot-on, and the library of editable presets will knock your socks off. Adobe Photoshop Lightroom 5 lets you edit RAW images on the Philips Hue lightbulbs, automations get even easier, and the effect engine continues its expansion. The Photoshop updates make it easier for you to work faster. The new features are a definite improvement. One of the major changes is Instagram, one of the most popular social-media apps. If you have an iPhone, Android, or iPad, you can edit images and video at the same time. If you like a particular app, you can add it to Photoshop for iCloud services, so you can make edits on the go. Ultimately, the integration is seamless.

Photoshop's Color Balancing tool has been updated with new features to give customers better control of the results each time they use it. Details on those features can be found in the blog post, **Prepared for fall: new color balancing features in Photoshop**. Adobe has released the last standalone version of Photoshop CS2, as version 13.0. A new version with some new features was postponed for 2014. An official interview with the Creative Suite team discusses the importance of Photoshop Extended, the company's latest big update, and how they look to the future. The biggest new feature in the.NET version of Adobe Photoshop Lightroom is the full-page view. In this article, we take you through Lightroom's new full-page view and detail all the options for printing. In the past, the only way to get a photo printed was to crop and resize it in Photoshop. Now, with the addition of a new button in the new Control Panel, you can toggle the page size of printing from a full page up to an 8.5" x 11" print. If you're looking for a quick and effective way to print your images, you should check out the new Full Page View in Photoshop. It's easy to use, and the new Control Panel gives you access to all your print settings. Photoshop's "blur" feature now comes with an option to always blur the background while keeping the elements sharp. Now you don't need to spend time creating an "extra layer" in your file for the background. The feature works the same way as when you use Layer Mask. Layer Masks are still needed in Photoshop, but the Background

Blur option can clean up many files without the need to manually cut and paste parts of the image.

Other improvements include:

- Prints (PDF) window
- Built-in fixes for recent macOS security issues
- Enhanced performance in the Quality panel
- Added “Smart Guides” to Layer “Reveal” for quicker access to recovered content
- Improvements to sub-sampled layer blending modes
- Ability to right-click on a Sublayer's contents to create a Mask Tint
- Additional controls for Layer Masks
- Increased the maximum number of layers to 2000
- Added Image “Updater” to extract and update existing layers (supports images up to 20MP)
- Added the ability to define new Color Profile
- Improved Color bar simplification
- Improved Layer “Reveal” window
- Improved performance in Layers panel
- Addition of Vignette controls to Hue/Saturation panel.

With those being some of the older enhancements, another of the newer additions that Photoshop is getting is making improvements to the overall speed of the app. Adobe claims it will offer up to 2x faster performance when large images are being edited, and Photoshop will now be able to speed up 2x when performing extensive edits. You will now be able to set active mask options to Create, Copy, Paste and Reveal (Ctrl/Cmd + clicking the tool will now prompt you to create a mask). You will also be able to define clipping masks in the Layer dialog, using Ctrl/Cmd + dragging within the dialog to make the mask. Image repair work will include white balancing transfers by Layer Masking in Rec Touch mode. There will be the option to revert all edits instead of applying them with Edit > Undo.

Moreover, the setting is still an issue with other products. Creative: You can do it wrong and then you want to have a check. If you want to see how the quality is, you can always delete the settings, it helps.
