MMP7 expression is associated with the progression of colorectal cancer and metastasis via regulating E-cadherin. Colorectal cancer (CRC) is one of the most common neoplasms in the world. However, the molecular mechanism underlying its metastasis is not well understood. Our study revealed that matrix metalloproteinase 7 (MMP7) was overexpressed in CRC tissues and cell lines. At the cellular level, MMP7 inhibited the activation of E-cadherin, leading to a decrease in intercellular adhesion. At the molecular level, MMP7 promoted E-cadherin phosphorylation. Moreover, we found that the inhibitory effect of MMP7 on E-cadherin was achieved by activating the NF- κ B pathway. Using bioinformatics database, we further found that this regulation was mediated by MMP7-induced p27 reduction and MDM2-HSP27 complex formation. Moreover, the level of MMP7 in CRC was also associated with postoperative recurrence and patient survival. These findings identify a novel mechanism of CRC metastasis. Alteration of phosphorylation state of erbB-2 in human myeloid leukemias: potential role of RTKs in leukemogenesis. Members of the family of receptor tyrosine kinases (RTKs) are involved in the signal transduction that ultimately leads to cell proliferation. To date, three members of the RTK family have been found to be activated in hematopoietic tumors, i.e., c-KIT and c-FMS in mastocytosis, and erbB-2 in a significant number of B and T-cell acute lymphoblastic leukemias. In the present study we analyzed the status of erbB-2 tyrosine phosph

I'm facing a really strange problem: Whenever I touch outside the slidingmenu (just with the finger) it goes into the free mode and shows the actionbar but when I open the menu it just crashes. I don't have any logcat ; I really don't understand what is wrong here, I looked for weeks for a solution but none was correct. I did found a similar problem on the web but the solution didn't work for me. This is my code, any idea?
