Pros: Excellent value for money, specially since you get a free DVD set for novice users and a lot of free time for more experienced ones. Con: Its sophisticated tools are more oriented towards professional users, not for casual. Less-than-ideal interface and some bugs. This program is aimed for people with no experience in editing photos, since it's much simpler than the full Photoshop. It's quite logical and intuitive, however, sketchy interface makes it harder than necessary for beginners. Overall, I'm rather impressed with good old CS2. And the fact that it's so easy to feel the similarities to CS5 is worth noting. Maybe it's not really so much the different, after all. It's that CS2 was much more like an evolution, and it continued to evolve—even beyond PS to Sketchbook Pro and Lightroom. But updating a desktop application to an iPad app seems so easy. It's almost as if Adobe was running around just trying to figure out how it could better serve its users. But I digress... David De La Hoz has been working with Apple's telephony network design and deployment, and his insight here is balanced and well-argued. He describes the impossibility of preventing certain uses of the Internet (for instance, the use of iOS 6's NSURLSession to download updates to the phone) and corporate networks, and the safety checks Apple and Cisco have done to mitigate the risks. Inside, Apple says this isn't a security issue and this isn't a network issue. This is a media issue. It's a lack of media file standards and collaboration standards, and no common format for storing media. Apple is clearly shying away from the 'proper' models, whether that's CNCMS or DITA standards.
