It's this unification across formats that leads to the next exciting step in the photo editing lifecycle. Now that we know the content of an image is the most important component, we can work on the imaging of it in a new era of photography. We use knowledge of an image to determine how to best expose and light it, to make the best edits and art direction to it, and even to reveal the content in it that still needs to be conveyed and spoken for.

In combination with intelligent tools the timeline is the perfect way to do this. Creating the highest quality image from the most important components first is a key component of this approach. It also means that once you start to layer composition and art direction onto an image, you've only created the true potential that this image has. The ability to distinctly and smartly place key highlights and focal points on an image is often one of the most crucial elements in achieving the best results for a picture. This means that it's the most important part of postproduction that you get right. At Precision Design, we get great joy from turning still photos into unique, modern, polished, and artistic visuals.
