I have a question, what would you recommend to use then, the Export option when using Pixelmator Pro? Just export the image into a PSD file, resize the PSD file back into the sized image, then use PS to proof the resized image? Would it be faster to export the image straight to PSD? Great review. I really appreciate it because it takes the time to explain all the nice features. It took me a few weeks to learn how to use Photoshop to get the most out of it for photography. I'm still a noob when using it, but you do a great job explaining how to arrange and use all the tools to get the best results. Specifically, I love the 'Free Transform' tool. It's a lifesaver, as the title states, for picture cropping. I also like the ability to manipulate images in 3D with layers. Even though Photoshop is great for retouching images, it is not ideal for fine arts type of work. It lacks the 3D support for that type of work. If I did a photo of a still life, for example, I'd probably use a 3D program, like Cinema4D or ZBrush, to make it look like a real life object. For those people who don't want to spend 100's of dollars on any type of photo editing, Painter and PS are the way to go. They're both good photo editing programs and they're both free. But I really do recommend Photoshop to any photographer who is looking to create something other than a design or newspaper type image. Again, thanks for the great review. Just wanted to add that I have been using Photoshop professionally for over 10 years, and I am always impressed with its power and flexibility. It has helped me to produce some very beautiful artwork.
