At a show where attendees can talk about their excitement for cutting-edge design, we were asked a pair of seemingly simple questions: "Is it possible to stay on top of the trends in digital design and make a living as a professional designer?" and "What's the best way for a beginner to get into design?" We walked away from the show feeling very excited by what we've seen. At the Massively Connected Creative Summit in San Francisco, a lot of attention was on the Magic Leap One and how it will change the future of technology and how people work together in it. The Magic Leap One is a device that has many implications. First, it brings AR (augmented reality) into your home; you can literally walk around a room and have the Magic Leap One immerse you in a digital world. Second, the Magic Leap One is essentially the first device on which you'll be able to create digital experiences using a Magic Leap One as your computer. Third, Magic Leap One is a holographic display that projects digital objects onto a room-sized screen of your choice—you may choose to use the Magic Leap One as the whole screen or as a smaller portion of a much larger screen. The quality of the images and the accuracy of the virtual objects being rendered by the Magic Leap One were both exceptional. Best of all, the Magic Leap One doesn't require a tangled mess of cables; it's an elegantly slimmed-down box that places the camera just to the side of your eyes. The Magic Leap team also demonstrated Roomalize, a virtual productivity tool that boosts the

productivity of content creators by injecting digital textures, objects and more onto real-world spaces. Using a particular room in the Magic Leap One as the canvas, a designer could walk around the room and place virtual content, such as virtual props or a wall texture, into specific spaces in the room. It's a clever use of the spatial awareness of the Magic Leap One and how it can be used to improve the creative experience.
